

APPENDIX

AMENDED CLAIMS WITH MARKINGS TO SHOW CHANGES MADE

(With deletions in brackets and additions underlined)

1. (Amended) An image signal transmitting apparatus for transmitting image signals stored in an image acquiring system or storage system to an image signal receiving center for processing the image signals, the image signal transmitting apparatus comprising:

a function selection panel, comprising a multiple keypad, for the entering of transmission signals by a user;

a receiving unit, comprising a transmission interface, wherein the receiving unit receives the image signals stored in the image acquiring system or storage system for the transmission interface;

a controller for receiving the image signals received through the transmission interface and the transmission signals entered by the user through the function selection panel, and for controlling the sending of the image signals; and

a transmitting unit coupled to the controller for sending the image signals to the image receiving center in a remote location according to the transmission signals.
